

N-PACT Compilation 2018

Norwegian Particle, Astroparticle
and Cosmology Theory community

Introduction

N-PACT is a network aimed at all researchers at Norwegian academic institutions (and Norwegians at CERN) working on Theoretical Particle physics, Astroparticle physics, or Cosmology. The founding workshop was 19.-22. June 2017 at the University of Stavanger, the second 28.-31. May 2018 also at UiS. The third workshop will held at the University of Oslo 5.-6. August 2019. The network compiles an annual summary of the combined scientific activity of the network members (this document), and runs an annual workshop and an email list: **npact@uis.no**.

N-PACT now appears as the official entity for PACT in the Norwegian contribution to the European Particle Physics Strategy Document (*Research Plans of the Norwegian Particle, Astroparticle and Nuclear Physics Communities till 2025*). It is stated:

For Norwegian theory, activities at and in connection with CERN play a major role, but rather than focusing on a specific experiment, the theory community takes a broader view and combines its interest in not only particle physics but also astrophysics and cosmology in the N-PACT theory collaboration. It is important that these theory activities be given an enhanced visibility in the European Strategy Update.

And in the section devoted to theory research activities, it says:

The Norwegian community in particle, astroparticle, and cosmology theory (NPACT) is coalescing and is represented here in a single section. A new networking activity has been initiated, connecting all six institutions where theory activities currently exist. As the result of a recent generational turnover, the majority of the network members are newly appointed staff at the six institutions and are of relatively young age (< 50 y). The network is working towards net growth, as well as increasing Norway's participation in CERN theory activities and the Norwegian quota there. To be successful, we see a need for funding opportunities for theory activities distinct from experiments, mirroring the role played by the Theoretical Physics Division at CERN.

This is then followed by a description of the specific PACT research activities.

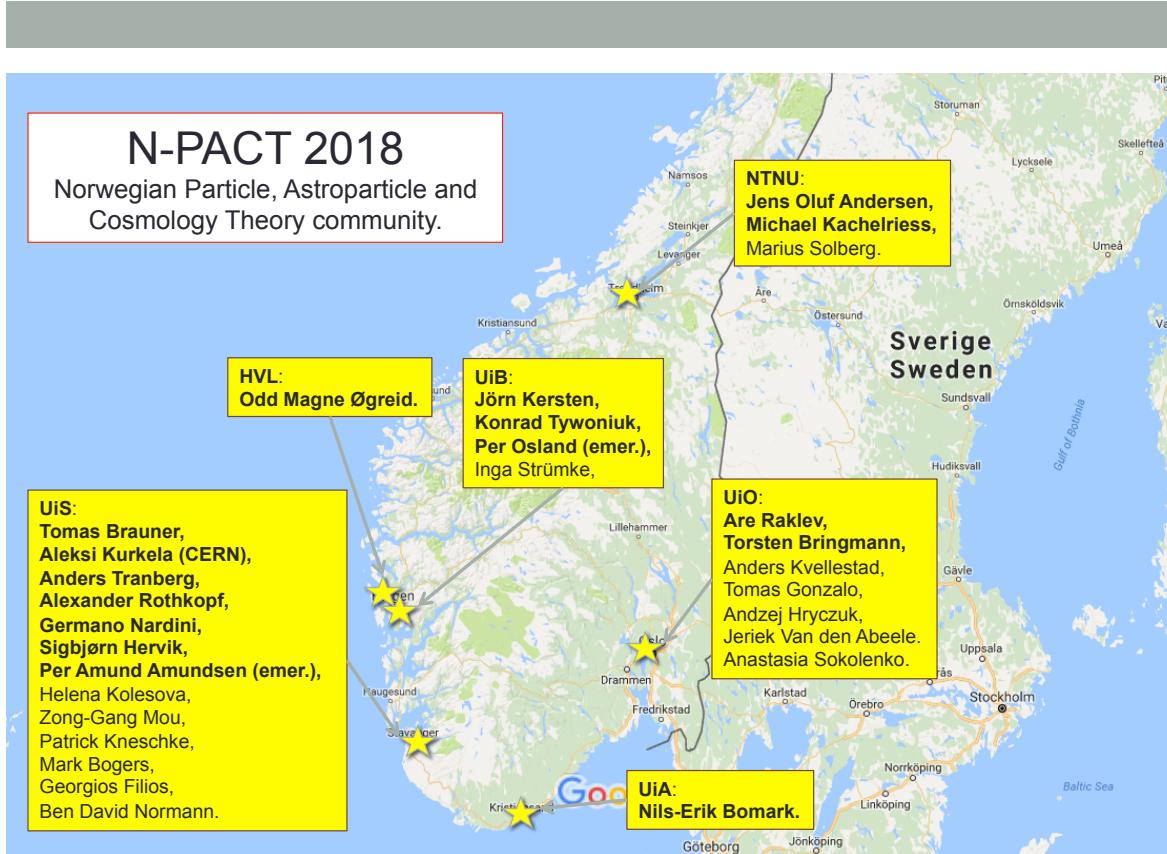

Figure 1: Network members and their affiliations in Norway

Member profiles

University of Agder

Nils-Erik Bomark,
Associate Professor.

At UiA since 2015. SUSY phenomenology, NMSSM, Dark Matter. How to teach particle physics non-technically.

University of Bergen

Jörn Kersten,
Professor.

At UiB since 2014. SUSY phenomenology, self-interacting dark matter, physics of the early universe, cosmology, neutrino physics.

Per Osland,
Professor (emer.).

At UiB since 1987. Particle phenomenology, Extended Higgs sector, CP violation, Dark Matter.

Inga Strümke,
Ph.D. student.

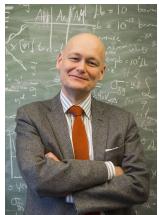

At UiB since 2015. Thermal field theory, SUSY-phenomenology, SUSY Dark Matter, Machine Learning.

Konrad Tywoniuk,
Researcher (Group Leader).

At UiB since 2018. Heavy-ion physics, hard probes (jet quenching, heavy bosons), finite temperature theory, cosmology.

University of Oslo

Are Raklev,
Professor.

At UiO since 2010. Particle Phenomenology, SUSY, Dark Matter. LHC, CERN, GAMBIT.

Torsten Bringmann,
Professor.

At UiO since 2013. BSM particle physics and cosmology. Astrophysical probes of dark matter: indirect detection and structure formation. Dark-SUSY, GAMBIT, CTA.

Tomas Gonzalo,
Postdoc.

At UiO since 2015. Physics Beyond the SM, Model Building, GUTs, SUSY, Inflation, Neutrino Models. GAMBIT.

Andrzej Hryczuk,
Postdoc.

At UiO since (December) 2015. Dark matter in the early and present-day Universe, physics beyond the Standard Model, finite temperature field theory.

Anders Kvellestad,
Postdoc.

At UiO/Imperial College since 2017. BSM global fits, LHC phenomenology, supersymmetry, two-Higgs-doublet models, machine learning and Bayesian methods. GAMBIT.

Anastasia Sokolenko,
Ph.D. student.
At UiO since 2016.

Jeriek Van den Abeele,
Ph.D. student.
At UiO. Astroparticle physics, Dark Matter.

University of Stavanger

Anders Tranberg,
Professor.
At UiS since 2013. Finite temperature and out-of-equilibrium field theory, cosmology, baryogenesis, inflation and gravitational waves. CERN, LISA.

Tomas Brauner,
Professor.
At UiS since 2015. Finite-temperature and -density field theory, phase diagram of QCD, effective field theory, spontaneous symmetry breaking.

Sigbjørn Hervik,
Professor.
At UiS since 2009. GR, Modified Gravity, Differential Geometry.

Per Amund Amundsen,
Professor (emer.).
At UiS since 1989. Theoretical Physics.

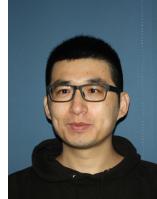

Aleksi Kurkela,
Associate Professor.
At UiS/CERN since 2014. Heavy-ion collisions, QCD at finite temperature, density. Compact stars. LHC, CERN.

Germano Nardini,
Associate Professor.
At UiS since 2018. Cosmological phase transitions, gravitational waves, beyond Standard Model physics.

Alexander Rothkopf,
Associate Professor.
At UiS since 2018. Lattice QCD, numerical field theory, out-of-equilibrium field theory.

Zong-Gang Mou,
Postdoc.
At UiS since 2016. Bayogenesis, non-equilibrium field theory, numerical simulations.

Helena Kolesova,
Postdoc.
At UiS since 2018. Finite-temperature field theory, symmetry breaking.

Georgios Filios,
Ph.D. student.
At UiS since 2018. Effective Field Theory, phases of QCD.

Mark Bogers,
Ph.D. student.

At UiS since 2015. Symmetry breaking
in quantum field theory.

Patrick Kneschke,
Ph.D. student.

At UiS since 2016. QCD at finite
temperature, density, magnetic field.
2HDM.

Ben David Normann,
Ph.D. student.

At UiS since 2015. Anisotropic cosmo-
logical models.

NTNU, Trondheim

Jens Oluf Andersen,
Professor.

At NTNU since 2005. QCD at finite
temperature and density: Quark-gluon
plasma, finite-density QCD and quark
matter, phase transitions.

Michael Kachelriess,
Professor.

At NTNU since 2005. High energy
astrophysics, dark matter, neutrino
physics.

Marius Solberg,
Associate Professor.

At NTNU since 2016. Works on N-
Higgs doublet models, quantum field
theory, particle phenomenology.

HVL, Vestlandet

Odd Magne Øgreid,
Associate Professor.

At HVL since 1999. Works on par-
ticle phenomenology, extended Higgs
sector, CP-violation.

Combined publication list

Metrics:

- 49 peer reviewed journal/proceeding publications, published during 2018.
- 54 publication points, using new formula,

$$\sum \left[\sqrt{\frac{\text{Authors/affiliations in NPACT}}{\text{All authors/affiliations}}} \times \text{If International} \times \text{Publication level score} \right]$$

where: *If International* is 1 if all authors are Norwegian, 1.3 otherwise; *Publication level score* is either 1 or 3, depending on the journal; *Authors/affiliations* count author/affiliation combinations (a single author with two affiliations counts twice); and where *All authors/affiliations* for a single publication is capped at 10 (for instance for GAMBIT).
